

FAUNA HELVETICA 13 (2005)

Scorpiones

Matt E. Braunwalder

“The dissecting knife has shown us the composition and organization of the scorpion's body. But how this living being acts, driven by his instincts, is largely unknown.” Jean-Henri Fabre (1913)

This publication presents the actual knowledge on the biology, ecology and distribution of the three species of the genus *Euscorpis* in Switzerland, based exclusively on the extensive results and discoveries, compiled by the author during more than ten years of research.

An indispensable manual for the specialist and the amateur who is interested in scorpions or who wants to know everything about the Swiss species !

This volume of 240 pages is richly illustrated by dozens of colour photographs, drawings, figures and tables. Moreover, it contains detailed explanations and informations concerning numerous other subjects like scorpion venom, how to avoid and to treat stings, aspects of the history of civilisation, threats and protection etc., advice on how to keep scorpions away from human dwellings, as well as a clear determination key and an extensive list with bibliographic references.

bilingual version: German - Italian
